

User's Manual For Honeycomb Wall Lamp(white)
Please read completely before use.

I. Cautions

1. Please only use a high-quality Adapter (Output 5V 2A) or the Lights will not work properly.
2. Do not connect more than twenty (20) Honeycomb Wall Lamp on one outlet.
3. The center of the Light responds best to the Touch function.
4. Because of the loss of electrical energy, white light will be chromatic aberration.

II. Installation Instructions

- 1 Place all lights face-down. Insert PCB Boards to connect the Lights. Build a design shape of your choice.
2. Snap in the triangle Connectors on some corners of the Lights to keep, the unit sturdy.
3. Insert the USB Cable into the Adapter. Find the USB Port on the light closet to the desired wall outlet. Connect the other end of the USB cable to the Honeycomb Wall Lamp. Plug the adapter into the wall outlet.
4. Make sure every Light works. Try using different PCB Boards if any Lights don't work.
5. Unplug the Adapter, then place the Lights face-down on a flat surface. Peel the paper from the Double-Sided Adhesive, and paste one side in the circled back on the Lights.
6. Find a place to display the Lights. After cleaning and drying the area, press the Adhesive Tape to the wall. The PCB boards are strong enough to further support the lights on a Hook, Nail, or Screw (not included).
7. Plug the Adapter back into the wall outlet. Touch the Lights to individually turn on and off the lights to customize your glow.

If ever there are questions about proper electrical usage, consult a licensed technician.
